#### A STARTLING ADMISSION.

nel is startlingly illustrated by a despatch blue or red weven in natural sites. from Albany which says that the State Board of Railroad Commissioners has withdrawn its restriction as to speed of trains running through it, upon the condition that the railroad company station a man at each home signal with torpedoes to put on the track when the signal is set at danger, and with intructions to go back to warn following trains should a train become stailed near the home signal. This undoubtedly was done at the reques of the New York Central Railroad, and is an admission that reliance cannot be placed upon its system of signalling. It is a very strong argument in favor of the passage of the bill now before the Legislature, directing that the tunnel be ventilated and lighted.

For nine years the New York Central Company, knowing the danger to which it was subjecting the passengers who travelled over its road, made no effort whatsoever to lessen it, and this safety measure would never have been sug gested had not the public risen in its might and entered its protest. And in spite of this fact efforts are being made ager, who stands a chance of being punished loss of life on Feb. 20th.
